A Thought to Begin With

Progress is rarely one big moment. It's thousands of small ones moving in the same direction.

- DigiMantra

From the Editors Desk

Welcome to this edition of Infinity, a reflection of fourteen years of building, learning, growing, and occasionally pausing to wonder how time moved this fast while we were “just delivering one more project.”

We also stepped beyond familiar walls into larger conversations. From sharing ideas at TiECON Chandigarh 2026, to driving multi-day dialogues at the AI Impact Summit, and strengthening academia-industry pathways through our MOU with NMIMS Chandigarh under DMLearning, an initiative by DigiMantra. Each moment reinforced a simple truth: learning no longer sits in one place; it moves, connects, and expands.

This quarter didn't arrive quietly. It showed up with intent. From gathering around a warm Lohri bonfire (where calorie counting is strictly suspended), to standing in collective pride on Republic Day, to being completely drenched in Holi colors that somehow still refused to leave our Zoom presence the next day.

And while the spotlight captures milestones, the real story lives in between: campus visits, health camps, sports leagues, webinars, late-night refinements, early-morning ideas, and all the unseen momentum that quietly holds a culture together.

Fourteen years in, we are still building with sharper intent, greater clarity, and a deeper understanding of why we started.

Still experimenting. Still evolving. Still slightly over-caffeinated when timelines get ambitious.

Because Infinity has never been about where we are. It is about how far we are willing to go.

One Chapter. *Infinite Moments.*

This is what
building
together
looks like.

14

The First Fourteen *Years*

**The milestone matters.
The momentum matters more.**

DigiMantra began with an idea and the belief that technology, when applied with purpose, can transform the way businesses operate.

Today, that idea spans five cities, three continents, global clients, three products in the market, and a learning initiative helping shape the next generation of talent. The scale has grown. The ambition has too.

Yet at the heart of it all, the purpose remains unchanged.

Moments That Brought Us *Together*

Lohri

Fire, warmth, and fresh beginnings. Digitians gathered around the bonfire to celebrate tradition, togetherness, and the promise of a new year.

Republic Day

Proudly building from India, for the world. A moment to reflect on the values that unite us and the future we're helping create.

Holi

Some days are for deadlines. Some are for colours. Across offices, the celebrations brought music, laughter, and a welcome splash of joy.

Women's Day

Celebrating the women who inspire, lead, create, and contribute every day. A meaningful reminder that every success story is strengthened by diverse voices and perspectives.

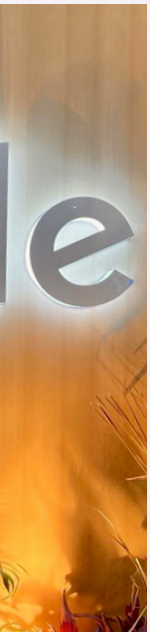

AI Impact Summit 2026

Beyond the Hype. Into the Impact.

The summit brought together leaders, innovators, and practitioners to explore the realities of an AI-driven future. From AI-first enterprise strategy and Generative AI in production to intelligent automation at scale, the conversations focused on what it truly takes to turn potential into impact.

DigiMantra was there not just to listen, but to engage. Beyond the sessions, some of the most valuable insights emerged in conversations between professionals, founders, and technology leaders. That is the value of a summit like this: bringing diverse perspectives together around a shared future.

What we took back was clarity. AI is no longer a future trend or a strategic option. It is becoming a fundamental part of how modern organizations innovate, operate, and grow.

CGC Landran

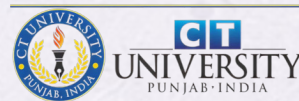

Students walked into DigiMantra's offices and walked out with perspective. Two days of firsthand exposure to how technology teams collaborate, innovate, and build.

Shoolini University

DMLearning hosted a Microsoft Certification session, equipping students with industry-recognized credentials designed to support their professional growth.

DMLearning - Four Campuses. *One Mission.*

Closing the gap
between
Classroom
learning and

CT University × DigiMantra Ludhiana

The Ludhiana office opened its doors for an immersive learning experience. Through live projects, team interactions, and real workplace exposure, students gained insights that extend far beyond the classroom.

A session on the future of careers and technology. A full room, thoughtful questions, and a reminder that the next generation is already preparing to lead.

MOU with NMIMS Chandigarh

A partnership built with the future in mind. Through its collaboration with NMIMS Chandigarh, DMLearning is creating stronger connections between academia and industry. Students gain access to real-world exposure, mentorship, and practical learning opportunities, while DigiMantra engages with emerging talent ready to make an impact.

Building the *Ecosystem*

TiECON Chandigarh 2026

INFINITY V4 ISSUE 1

Where ideas, ambition, and execution come together.

TiECON Chandigarh 2026 brought together innovators, entrepreneurs, and industry leaders to explore what's next in AI-driven innovation, digital-first growth, and the future of entrepreneurship. The event served as a powerful platform for meaningful conversations shaping today's fast-evolving business landscape.

Key discussions revolved around how technology is reshaping industries, how businesses can scale through innovation, and how talent and leadership must evolve to stay future-ready.

DigiMantra was not just an attendee, we were actively part of the conversation. Our focus was on sharing insights around digital transformation, AI adoption, and building scalable, experience-driven digital ecosystems for modern businesses.

Ideas in Session

Webinar 1 - Master Modern AI & Advanced Intelligence

From foundational concepts to emerging applications, the first webinar of 2026 explored how AI is reshaping the way professionals work, innovate, and compete. Designed for forward-thinking learners, the session focused on understanding and applying AI in a rapidly evolving digital landscape.

Webinar 2 - HR: The Human Behind the Resource

People strategy remains at the heart of business success. This session explored the evolving role of HR in an AI-driven workplace, covering talent acquisition, employee engagement, retention, and the leadership skills shaping the future of work.

Webinar 3 - Leveraging AI with Solo-Preneurship

Building a business today no longer depends on the size of a team. This webinar explored how AI can help individuals launch, automate, and scale ventures more efficiently, enabling a new generation of entrepreneurs to build with greater agility and impact.

Competition & *Camaraderie*

DigiCue Pro League 2026

Strategy was on display long before the final shot. Precision, patience, focus, and composure defined every match, proving that some of the qualities that drive success in business are equally valuable at the billiards table. DigiCue Pro League returned with competitive spirit and memorable moments.

DigiCourt Royale 2026

Competition has a way of bringing out the best in people. DigiCourt Royale 2026 brought together energy, teamwork, and healthy rivalry, creating moments that extended far beyond the court. More than a tournament, it was a celebration of collaboration, resilience, and team spirit.

Wellbeing *Matters*

Eye Health Camp

Good work starts with good health. The Eye Health Camp brought professional eye checkups and expert consultations directly to the workplace, making preventive care more accessible for every team member. Because seeing clearly matters, both inside and outside of work.

Health Checkup Camp

A healthy team is a stronger team. Through general wellness screenings across offices, employees had the opportunity to better understand and monitor their health. A simple initiative, and an important reminder that wellbeing deserves attention long before it becomes a concern.

Community & Collaboration

CT University Convocation

DigiMantra was proud to be part of a milestone moment for graduating students as they stepped into the next chapter of their journey. Our association with CT University reflects a shared commitment to preparing talent for the opportunities and challenges of the professional world.

HR Sprint

At Shoolini University, HR Sprint brought together bright and curious minds for a discussion on career clarity, smarter decision-making, and navigating opportunities in an AI-driven world. The session offered valuable insights into building a future-ready mindset and career path.

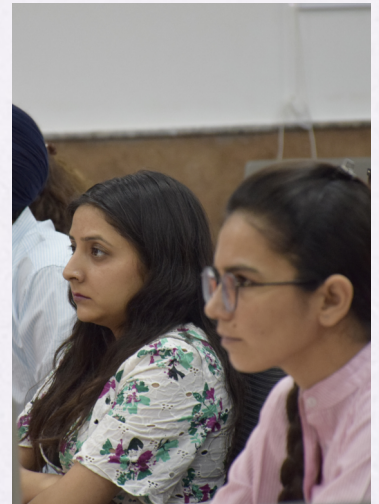

Chitkaraverse

DMLearning joined Chitkara University's flagship innovation showcase to engage with aspiring talent, emerging ideas, and future possibilities. Through meaningful conversations and industry interaction, the event reinforced the value of connecting learning with opportunity.

More Than a *Partnership*

The **Amit Tiwari**
Collaboration & Tricity Meetup

Some partnerships begin with contracts. The best ones begin with conversations.

The collaboration between DigiMantra and Amit Tiwari brings together digital growth, AI-led thinking, and community-driven learning under DMLearning. Focused on practical, industry-relevant digital marketing skills, the initiative aims to bridge knowledge with real-world application.

That shared vision extended naturally into the Tricity Meetup, where professionals, founders, creators, and learners from across the region came together to exchange ideas, experiences, and perspectives on the evolving digital landscape.

Building *Responsibly*

Earth Day and World Environment Day are more than dates on a calendar. They are reminders that progress carries responsibility.

At DigiMantra, we believe innovation and sustainability go hand in hand. As technology continues to transform the world around us, building responsibly means thinking beyond today and creating solutions that contribute to a better tomorrow.

Build Smart. Build for the Future.

The Infinity *Storybook*

A brief, irreverent history
of how **AI** got here.

In 1950, Alan Turing asked a simple question:

Can machines think?

More than seven decades later, machines can write, translate, diagnose, recommend, and create. The question remains fascinating, but the impact is no longer theoretical.

AI's journey hasn't been a straight line. It has moved through waves of excitement, skepticism, breakthroughs, and reinvention. Expert systems in the 1980s, statistical learning in the 1990s, and the explosion of data in the 2000s each pushed the field forward.

Then came a turning point. Advances in deep learning transformed what machines could recognize, understand, and generate. What was once confined to research labs gradually became part of everyday life.

Today, AI powers the tools we use, the products we build, and the decisions we make. The conversation is no longer about whether AI works. It is about how we use it.

At DigiMantra, we're helping shape that answer.
